Online Library After The Ice A Global Human History 20 000 5000 Bc

20,000 BC, the peak of the last ice age—the atmosphere is heavy with dust, deserts, and glaciers span vast regions, and people, if they survive at all, exist in small, mobile groups, facing the threat of extinction. But these people live on the brink of seismic change—10,000 years of climate shifts culminating in abrupt global warming that will usher in a fundamentally changed human world.

After the Ice — Steven Mithen | Harvard University Press

The other clever, and poignant, aspect of this book is that Mithen explores how studying the abrupt transition between the ice age and a period of global warming could provide clues to the effects of climate changes going on today. Nina Jablonski states that 'by the end of this rich and multilayered book, I was dazzled and hungry for more.

The average global temperature during the last Ice Age 20,000 years ago was 7.7 degrees centigrade, scientists have revealed. The temperature of the planet during the Last Glacial Maximum (LGM ...

We now know the average global temperature during the last ...

Global sea levels To form the ice sheets of the last Ice Age, water from the oceans evaporated, condensed as snow and was deposited as ice in high latitudes. Thus global sea level fell during glaciation. The ice sheets at the last glacial maximum were so massive that global sea level fell by about 120 metres.

Post-glacial rebound - Wikipedia
