& Geometric)  
Answer Key**

Arithmetic Sequences  
- Module 12.1 (Part 1)

Algebra 2 Arithmetic  
Sequences Answer

If the first term of an arithmetic sequence is  $a_1$  and the common difference is  $d$ , then the  $n$ th term of the sequence is given

# File Type PDF

## Algebra 2

by:  $a_n = a_1 + (n - 1)d$

An arithmetic series is the sum of an arithmetic

sequence. We find the sum by adding the first,  $a_1$  and last term,  $a_n$ , divide by 2 in order to get the mean of the two values and then multiply by the number of values,  $n$ :  
$$S_n = \frac{n}{2}(a_1 + a_n)$$

## Algebra 2

### Arithmetic Sequences and Series | Algebra 2 | Sequences ...

This sequence has a difference of 5 between each number. The values of  $a$  and  $d$  are:  $a = 3$  (the first term)  $d = 5$  (the "common difference") Using the Arithmetic Sequence rule:  $x_n = a + d(n-1)$   
 $= 3 + 5(n-1) = 3 + 5n$

# File Type PDF

## Algebra 2

?  $5 = 5n$  ? 2. So the  
9th term is:  $x_9 = 5 \times 9$   
? 2 = 43. Is that right?  
Answer Key  
Check for yourself!

Geometric Sequences  
- Practice Test  
Questions ...

In General we can  
write an arithmetic  
sequence like this:  $\{a, a+d, a+2d, a+3d, \dots\}$   
where:  $a$  is the first

# File Type PDF

## Algebra 2

term, and  $d$  is the difference between the terms (called the "common difference")

And we can make the

rule:  $x_n = a + d(n-1)$

(We use " $n-1$ "

because  $d$  is not used in the 1st term).

The two main types of series/sequences are

# File Type PDF

## Algebra 2

Arithmetic and  
geometric. Some  
sequences are neither  
of these. It's

important to be able  
to identify what type  
of sequence is being  
dealt with. An

arithmetic series is  
one where each term  
is equal the one  
before it plus some  
number. For example:  
5, 10, 15, 20, ... Each

File Type PDF
