combination of high-pressure pump, injectors, rail and electronic control unit results in systems for all types of engine.

Common Rail Systems, Bosch  
Common Rail Systems

The high-pressure pump CP4 delivers the fuel into the connected rail under high pressure. The CP4 consists of one or two high-pressure elements, each integrated in a housing with its own camshaft. The pump camshaft is driven by belts, chains, or cogwheels and moves the pump pistons to generate the required high pressure.

High-pressure rail for common-rail systems for precise fuel injection and reduced emissions The high-pressure rail gives its name to the common-rail system and binds the pump and injectors together as the central hydraulic component. It stores the compressed fuel and supplies this to the injectors.
