Catapult, mechanism for forcefully propelling stones, spears, or other projectiles, in use mainly as a military weapon since ancient times. The ancient Greeks and Romans used a heavy crossbowlike weapon known as a ballista to shoot arrows and darts as well as stones at enemy soldiers. The term catapult too can refer to these weapons, but more often it designates a larger engine that is used to hurl stones from a single long arm swinging through the vertical plane.

That early fourth century B.C. type of catapult is probably not the one most of us envision—a torsion catapult that throws stones to break down enemy walls, but an early version of the Medieval crossbow that shot missiles when the trigger was released. It is also called a belly-bow or gastraphetes. It was attached to a stock on a stand that Ober thinks could be moved a bit for aiming, but the catapult itself was small enough to be held by a person.

~~Catapult Definition, History, and Types~~

A catapult is a ballistic device used to launch a projectile a great distance without the aid of gunpowder or other propellants — particularly various types of ancient and medieval siege engines. A catapult uses the sudden release of stored potential energy to propel its payload. Most convert tension or torsion energy that was more slowly and manually built up within the device before release, via springs, bows, twisted rope, elastic, or any of numerous other materials and mechanisms. The ...

Catapult history dates back to 300 BC, but the most advanced catapults were created by the Greeks and the Romans. The sheer power of these siege weapons struck fear in the hearts of many enemies. In medieval times, countries were constantly waging wars against one another, trying to establish their dominance. This was often decided on the basis of whose fortifications were more easily breachable than the others.

Hunting Catapults. Catapults and slingshots have been used to hunt for centuries. These small weapons are typically made up of a fork-shaped frame with one or two rubber strips attached to each side. Ammunition can be placed in the centre of the rubber strips and drawn back to determine how far forward it will travel.
