An incline is a binary system $(S, +, *)$ such that $(S, +)$ is an abelian semigroup, (S, \cdot) is a semigroup, \cdot distributes over $+$ on the left and right, $x + xz = z$ for all z in S and $x + xy = r = x + yx$ for all

Abstract. This paper investigates the semigroup of incline Hall matrices. An incline Hall matrix means an incline matrix which is greater than or equal to an incline invertible matrix. It is proved that any incline Hall matrix has index.

Applications In this chapter, we graphed lines by plotting points, by using intercepts, and by recognizing horizontal and vertical lines.

Another method we can use to graph lines is the point-slope method. Sometimes, we will be given one point and the slope of the line, instead of its
