Assignment Problems: SOLUTION OF AN ASSIGNMENT PROBLEM ...

In operations research, a team of experts from the different fields first define the problem then represent that problem in the form of a set of mathematical equations. After that, the computer analysis of these mathematical equations is done to find a solution for the problems, and then these solutions are applied to solve managerial and administrative problems.

The British/Europeans refer to "operational research", the Americans to "operations research" - but both are often shortened to just "OR" (which is the term we will use). Another term which is used for this field is "management science" ("MS"). The Americans sometimes combine the terms OR and MS together and say "OR/MS" or "ORMS".

(e.g. factories) to a given number of destinations (e.g. warehouses). These types of problems can be solved by general network methods, but here we use a specific transportation algorithm. The data of the model include.

From this table, the improved basic feasible solution is read as: $x_1 = 2$, $x_2 = 0$, $s_1 = 2$, $s_2 = 0$. The improved value of $Z = 6$. Thus the optimal solution is obtained as $x_1 = 3$, $x_2 = 1$, $\max z = 11$.
Step 6: Now repeat step 3 through 5 as and when needed until an optimum solution is obtained in table 5. $\Delta k =$

These, too, are search problems, and solution techniques described above are applicable to them. Frontiers of operations research. Operations research is a rapidly developing application of the scientific method to organizational problems. Its growth has consisted of both technical development and enlargement of the class of organized systems and the class of problems to which
